For each question on the test students receive 1 point for a correct answer, lose ¼ of a point for each incorrect answer, and receive 0 points for questions left blank. The total of these points is the student's raw score, which is then transplanted into a scaled score based on the relative success of other students who have taken the same test. The scaled score ranges from 200-800. 200 is ...

Answer: Students are not to study for both the pre-test and the post-test. After the pre-test is taken and graded, the students get to see their tests, but they must return them to the teacher. By doing this, the students will not know what to expect when they see and take the post-test which is the same as the pre-test.

The test is viewed as the gold standard; however, it is not without problems. The PCR test uses chemicals to amplify the virus's genetic material and then each sample goes through a number of cycles until a virus is recovered. This "cycle threshold" has become a key component in the debate around the efficacy of the PCR test.
