The solution of the differential equation, with $y(0) = a$, is $y(t) = \frac{a - b}{a - b} e^{-kt} + b$. As $t \rightarrow \infty$, the exponential term vanishes, and hence the limiting value is $y = b$. The rate of the chemical is

. At any time t , the concentration of the chemical in the pond is $u(t)$ grams per gallon.

At $t = 0$, the concentration is $u(0) = 0$ grams per gallon.

Chemical enters the pond at a rate of 100 grams per hour. The pond is well-mixed, so the concentration of the chemical in the pond is the same as the concentration of the chemical in the outflow.

Consequently, the rate of change of the concentration of the chemical in the pond is $u'(t) = 100 - 2u(t)$.

Find the concentration of the chemical in the pond at any time t .

Consequently, the chemical the ...
