Paul A. SAMUELSON\* Massachusetts Institute of Technology, Cambridge, MA 02139, USA He who acts in N plays to make his mean log of wealth as big as it can be made will, with odds that go to one as N soars, beat me who acts to meet my own tastes for risk. Who doubts that?

### Paul A. SAMUELSON\*

In his earliest work on trade, including, Samuelson used his theorem of revealed preference to show that in a representative agent economy (where everyone is the same), free trade must be welfare improving for all parties. If trade were not welfare improving, a country could choose to continue in autarky, ignoring the rest of the world.

This chapter provides an appraisal of Samuelson's work on trade theory. It explains the scientific importance of starting with the Ricardian 2x2 model and the current literature on comparative advantage. Samuelson rests this model on the shoulders of giants, whether we want to explain gains from trade by swapping bananas for steel, or from the modern theoretical points of view.
