Though he was building on the work of his mentor, Count George-Louis Leclerc de Buffon, Jean-Baptiste Lamarck (1744-1829) is often credited with making the first large advance toward modern evolutionary theory because he was the first to propose a mechanism by which the gradual change of species might take place. Also, he extended the definition of the change over time, saying that life started ...

In biology, taxonomy (from Ancient Greek ?????? () 'arrangement', and -????? () 'method') is the scientific study of naming, defining (circumscribing) and classifying groups of biological organisms based on shared characteristics. Organisms are grouped into taxa (singular: taxon) and these groups are given a taxonomic rank; groups of a given rank can be aggregated to form a more ...

Such sketches guide new research to fill in the details (Craver and Darden 2013). 2.2 Information . The language of information appears often in molecular biology. Genes as linear DNA sequences of bases are said to carry "information" for the production of proteins. During protein synthesis, the information is "transcribed" from DNA to messenger RNA and then "translated" from RNA ...

Dissection (from Latin dissecare "to cut to pieces"; also called anatomization) is the dismembering of the body of a deceased animal or plant to study its anatomical structure. Autopsy is used in pathology and forensic medicine to determine the cause of death in humans. Less extensive dissection of plants and smaller animals preserved in a formaldehyde solution is typically carried out or ...
