Visual weight differs in size or weight as we know it. It's all about what we're drawn to when we look at a photo. When you understand visual weight, you'll start to understand how people look at photos. And how you can position certain elements in a frame to direct the viewer's attention to where you want them to look.

See it, search it | Bing Visual Search

Photo or photograph - Anything taken by a camera, digital camera, or photocopier. Picture - A drawing, painting, or artwork created on a computer. A picture is also used to describe anything created using a camera or scanner. The image above is a visual example of the differences between these three words.

What is the difference between an image, photo, and a picture?

Photography is an art that relies on light. It also relies heavily on the visual message. You have no way of communicating anything to your viewer except through the visual language you use. If you use strong visual elements, your images will be effective and people will stop and look. If you want to convey [...]

3D photography or stereoscopic photography is the art of capturing and displaying two slightly offset photographs to create three dimensional images. The 3D effect works because of a principle called stereopsis. Each eye is in a different location, and as a result, it sees a slightly different image.
